RESTRICTION INTO GROUPS

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-23 and 25-29, drawn to a method of producing a composition that
paste/flowable composition/cement, classified in class 424, subclass 1.11+.
 - II. Claims 1 and 24, drawn to a method of repairing a hard tissue defect using a flowable
composition, classified in class 424, subclass 9.1.

Note: Claims appearing in more than one group will only be examined to the extent that it reads on the elected group.

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the method of repairing a hard tissue using a flowable composition comprising a setting fluid, dry reactants comprising a calcium source and a phosphate source in combination with a water soluble contrast agent may be used with a paste or cement material which both may be flowable compositions depending on the viscosity of the desired form. Thus, the flowable composition of claim 24 may involve several forms of the water-soluble contrast agent.

3. The inventions are distinct from each other for the reasons set forth above. Hence, since these inventions are distinct and have acquired a separate status in the art because of

Art Unit: 1618

their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

ELECTION OF SPECIES

4. Claims 1-29 are generic to a plurality of disclosed patentably distinct species comprising, various forms of a composition comprising dry reactants comprising a calcium source and a phosphate source in combination with a contrast agent.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Notes: The Examiner respectfully requests that Applicant elect a species from within the elected group. The species, if applicable to the elected group, should identify a specific setting fluid; the dry reactants comprising a calcium source and a phosphate source; and the water-soluble contrast agent. Applicant is respectfully requested to identify all the claims drawn to the elected species.

5. Should Applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1618

application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to D. L. Jones whose telephone number is (571) 272-0617. The examiner can normally be reached on Mon.-Fri., 6:45 a.m. - 3:15 p.m..
